(5) Proposal Abstract :

We propose to conduct sensitive space-VLBI observations of three low scattered OH masers using world largest ground telescopes in conjunction with the HALCA. This will allow us to examine maser spots with full available resolution of space-ground interferometer in contrast to the previous study in which the resolution was limited by the low signal to noise ratio.

(6) Proposal Category (indicate all that apply):

Object type:

☐ AGN, ☒ Maser, ☐ Stellar, ☐ Pulsar, ☐ Other :

Observation type:

☐ Continuum, ☒ Spectral Line, ☐ Polarization, ☒ Time critical,

☐ Phase-reference, ☐ Other :

**(7) Number of proposed experiments**

An ‘experiment’ is one or more observations of one source at a fixed HALCA set-up. A request to observe the same source at 1.6 GHz and separately at 5 GHz requires two columns to be filled in in item (8) below. A request to observe the same source with HALCA simultaneously observing at 1.6 GHz and 5 GHz requires one column to be filled in. Multi-epoch observations of the same source at the same frequency – a ‘monitoring experiment’ – requires only one column to be filled in. Suggested observing dates, especially for for time-critical and monitoring experiments, should be specified in item (11).

The number of experiments in this proposal is:
